PROFESSIONAL SUMMARY

Backend-focused Software Engineer with 6+ years of experience building scalable, high-performance systems across PHP, Node.js, and Python. Currently engineering robust third-party integrations and backend services at BambooHR. A pragmatic problem-solver who builds custom AI agents, leverages tools like Claude, Cursor, Windsurf, and OpenAI Codex, and applies OOP principles to design clean, maintainable systems. Known for using AI-assisted workflows to ship reliable solutions faster and at higher quality — without cutting corners. Proven track record designing efficient APIs, optimizing relational databases, and collaborating within CI/CD pipelines to deliver production-grade software.

TECHNICAL SKILLS

Languages: PHP, JavaScript / TypeScript, Python, SQL

Backend: Node.js, Django, Laravel, RESTful API Design, Microservices

Frontend: React, React Native, Angular

Databases: PostgreSQL, MySQL — schema design, query optimization, indexing

DevOps & Cloud: Docker, CI/CD (GitHub Actions, Jenkins), AWS (EC2, S3, RDS)

AI & Automation: Claude, OpenAI Codex, GitHub Copilot, Cursor, Windsurf — AI agent development, prompt engineering, LLM-powered features

Practices: OOP, Agile / Scrum, Code Review, TDD, SDLC, Cross-functional Collaboration

EXPERIENCE

BambooHR | *Software Engineer, Backend* Sept 2025 – Present

- ▶ Build and maintain PHP-based backend services and third-party integrations that power BambooHR's HR platform, supporting thousands of enterprise customers.
- ▶ Design and optimize relational database schemas, queries, and indexes (MySQL / PostgreSQL) to ensure high-throughput, reliable data operations at scale.
- ▶ Work within established CI/CD pipelines (GitHub Actions) to deploy backend services reliably — running builds, monitoring pipeline health, and coordinating releases across staging and production.
- ▶ Build custom AI agents and automation skills using Claude, OpenAI Codex, Cursor, and Windsurf to streamline development workflows, eliminate repetitive tasks, and ship features more efficiently.
- ▶ Apply AI-assisted development daily — using Claude, GitHub Copilot, Cursor, and Windsurf — to accelerate code generation, improve review quality, and maintain high output without sacrificing reliability.
- ▶ Collaborate cross-functionally with product, QA, and platform engineering teams to translate complex business requirements into clean, maintainable backend solutions with well-defined API contracts.

25:2 Solutions | *Full Stack Engineer* Sept 2021 – July 2025

- ▶ Architected and delivered full-stack applications using React, Node.js, Django, and PostgreSQL; designed scalable backend APIs serving both web and mobile clients.
- ▶ Built cross-platform mobile apps with React Native and Expo, cutting development time by 50% while shipping seamless experiences across iOS and Android.
- ▶ Engineered RESTful API performance improvements — reducing data latency by 20% and improving load times by 25% through query tuning, caching strategies, and efficient data modeling.

- ▶ Integrated OpenAI API to deliver intelligent product features that increased user engagement by 35%; established a reusable AI integration framework adopted across subsequent builds.
- ▶ Implemented Docker containerization for consistent, reproducible deployment pipelines across development and production environments.
- ▶ Established code review processes and led cross-functional collaboration with design and product stakeholders to align technical execution with business goals.

SafeStreets USA | *Junior Software Developer* July 2019 – Dec 2020

- ▶ Built responsive web applications with Angular and TypeScript; delivered UI and performance improvements that increased application speed by 22%.
- ▶ Created a reusable Angular component library that cut new feature development time by 15% and standardized UI/UX consistency across the platform.
- ▶ Integrated Angular frontends with Java-based REST APIs, ensuring reliable data flow and a seamless end-user experience.
- ▶ Achieved a 99.8% defect-free deployment rate through rigorous testing, debugging, and QA processes on customer-facing applications.
- ▶ Actively participated in Agile / Scrum ceremonies — standups, sprint planning, retrospectives — within a 5-member cross-functional team to consistently hit delivery targets.

Alder Holdings, LLC | *Software Developer Intern* Jan 2019 – Apr 2019

- ▶ Conducted automated testing with Selenium to identify and resolve bugs, contributing to a 15% reduction in system downtime.
- ▶ Partnered with senior engineers to optimize application performance and adopt best practices across the development lifecycle.

EDUCATION

Brigham Young University – Idaho | B.S., Computer Information Technology · 2018 – 2021
